

Kala Geosciences Ltd. is a 30 year earth sciences consulting firm. If you are interested in joining an innovative, collaborative team in which to grow professionally, this will be well suited for you. Live and work in Kamloops, BC, a thriving city of 90,000 with countless outdoor and cultural opportunities at your doorstep including world class skiing and mountain biking; lakes and rivers abound throughout our region. Our rain shadow location promotes a semi-arid climate with four season activities.

**At Kala, we are driven towards practical solutions within the earth sciences consulting field. We are a small firm where every role is valued.**

This opportunity is for a Project Geoscientist having a minimum 8 years of relevant experience in earth sciences consulting, whether public or private sector. Responsibilities will include but not be limited to:

### **Environmental/Groundwater/Wastewater**

- Project management
- Taking part in a broad range of technical services in the fields of hydrogeology, environmental sciences and treated wastewater to ground studies;
- Review of Phase 1 Environmental Site Assessments and completion of Phase 2 Environmental Site Investigations
- Field investigations including supervision of air rotary, hollow stem auger and sonic drilling programs, and various media sampling for environmental studies
- Involvement with the coordination and/or execution of various environmental projects at an intermediate level, including environmental due diligence and contaminated site related projects, waste management and decommissioning
- Assisting with creation and review of estimates, scope of services, change orders, scope changes, tenders, and statement of qualifications
- Liaising with clients, contractors and staff
- Completion of water well drilling and rehabilitation programs, pumping tests, slug tests and water sampling
- Creation and delivery of subsurface soils investigation programs
- Report and proposal preparation and review
- Reduction and analysis of data using various software packages
- Assurance of adherence to various provincial, federal and office compliance criteria
- Completion of small to large scale wastewater to ground impact assessments
- Groundwater dewatering projects
- Travel provincially and inter-provincially as required
- Maintain a Client focused behavior and adherence to high ethical standards

## **Skills & Experience:**

- Strong project management skills
- Must possess a Professional Geoscientist (P.Geo.) designation in Canada, preferably within BC, and transferable where required
- Project management background with a minimum of eight (8) years of related project management experience
- Familiarity with the regulatory environment in BC is an asset;
- Must have a valid driver's license, be safety oriented, experience driving pickup trucks and have field experience with various forms of drilling and testing apparatus;
- Ability to conduct multiple projects concurrently and deal with demanding clientele
- Solid knowledge of federal and provincial regulations pertinent to groundwater exploration, wastewater to ground investigations, Phase 1-3 Environmental Site Assessments, source water protection assessments, and soil and groundwater investigations for wastewater disposal
- Excellent command of the English language, both written and oral
- Training, mentoring and coaching available

## **Benefits**

- Competitive benefits and remuneration packages
- Future corporate buy in options
- Deepen your expertise in a dynamic work environment
- Training, mentoring and coaching available
- Encouragement of professional development
- Vision care
- Extended health care
- Dental care
- RRSP Match
- Vacation & paid time off
- Life insurance
- On-site parking
- Education reimbursement
- Disability insurance

Salary Range: \$75,000 to \$90,000
